

# Simultaneous representations of distributive (semi)lattices

Jiri Tuma

(joint work with F. Wehrung and P. Ruzicka)

*Karlova Univerzita, Prague*

*Czech Republic*

We investigate the existence of simultaneous representations of small diagrams of finite Boolean semilattices as copact congruence semilattices of algebras of various types. The results are applied to algebras with permutable congruences and to varieties of algebras with non-trivial congruence identity.
